**Figure S6 Histological characterization of lung tumors in transgenic mice.**

(A) Hematoxylin-eosin staining of a mouse lung showing invasive lung adenocarcinoma surrounding a pulmonary vessel (a1). Higher magnification of the tumor (a2). Positive Ki-67 staining in the tumor (a3). Scale bar, 100 $\mu$ m.

(B) Hematoxylin-eosin staining of a mouse lung showing cytoplasmic mucin in lung adenocarcinoma cells (b1). Higher magnification of the tumor (b2). Scale bar, 200 $\mu$ m.
